

## Reseller in the spotlight

**Get to know a NEDCON Reseller:  
Sieper Lagertechnik**

**NEDCON greatly values its Resellers. In this newsletter we would like to highlight a Reseller who, in addition to selling NEDCON products, has developed his own specific products based on the NEDCON components.**

Sieper Lagertechnik is located in Rommerskirchen, a town 25 km north-west of Cologne in Germany. This company has been active in the field of planning, projecting, supplying and assembling storage and industrial equipment since 1993. The core competence is to serve customers for all kinds of manual storage systems. Sieper Lagertechnik offers a wide range of products from standard products to individual solutions.

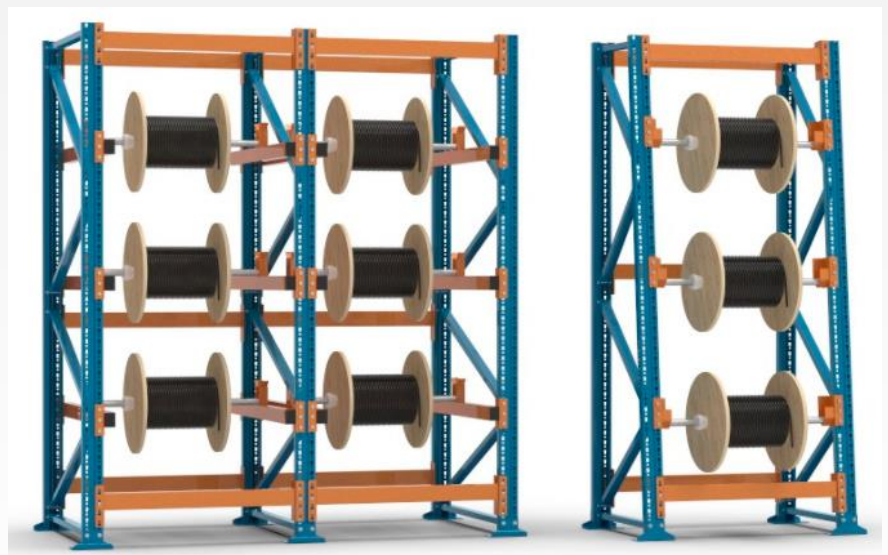

For a smaller market, where NEDCON does not offer standard solutions, Sieper Lagertechnik has developed solutions based on the NEDCON components. All these solutions are structural substantiated and guarantee the desired safety regulations.

In this article we will bring about 3 Sieper Lagertechnik products to your attention. Perhaps this article can help you in fulfilling customer requirements for which you do not currently have a solution.

## 1. Cable reel racks

A storage system has been developed for the storage of cable reels based on the NEDCON pallet rack. Not only the rack is supplied but also the accompanying shafts and clamping cones in various diameters.

There is an inclined version, which can be used up to a maximum reel weight of 500 kg and a straight version that allows reels up to 1,000 kg.

## 2. Vertical storage racks

Vertical storage racks are suitable for longer products that need to be stored vertically. The products are supported against support arms which are fixed around the beams. The range consists of single sided (1 sloping upright) and double-sided storage (2 sloping uprights). The sloping uprights are at an angle of 10° and heights of 2500 and 3000 mm are available as standard. The beam lengths are 1825 and 2700 mm as standard, and the support arms have depths of 500 and 750 mm (which are clamped to the support beams and secured with set screws). Other sizes are of course also available.

### Some features:

- Sturdy upright profile with a width of 100 mm
- Frame in screwed version
- Stable distribution arms, stepless adjustable, with screw clamping
- Beams with 4-hook connectors and safety pins

### 3. Pallet racking for outdoors

Pallet racks for outdoor storage require special attention in connection with wind loads and weather conditions that cause corrosion. Sieper Lagertechnik has developed a hot dipped galvanized pallet rack based on the NEDCON components. By special floor fastening, possibly on foundations to be placed, it meets the design criteria.
