

NEDCON Shelving Systems

Shelving systems are an affordable solution for the storage of a wide variety of small goods.

Ideal for order picking and parts warehouses. The sturdy shelving systems offered by NEDCON can be arranged any way you want.

**If it can be done,
consider it done**

Advantages of NEDCON shelving systems

- Affordable and modular manual storage system for small goods.
- Quick and easy to extend and adjust
- Available in standard section widths of 1000, 1250 and 1500 mm, and frame depths varying from 300 to 800 mm
- Upright lengths up to 14 metres, ideal for combining with mezzanine floors, pallet racks and flow racks
- Wide range of accessories for various storage methods
- Safe for employees and your products
- Satisfies FEM 10.2.06 guidelines and national regulations
- Available in all RAL colours

If it can be done,
consider it done

NEDCON shelving systems are a familiar sight in warehouses used for e-commerce, wholesale and parts, among other things. They are characterised by their high load capacity, which can partly be attributed to the cleverly designed steel sheet shelves. A standard sized 125 Omm wide shelf can easily bear 175 kilos. NEDCON shelving units can reach dizzying heights: the uprights are strong enough to support several mezzanine floors.

Modular and robust

When you choose NEDCON, you choose a modular, robust and easily assembled (and disassembled) system that you can arrange however you want. The shelves are available in a variety of depths, and can be adjusted in height in 25 mm increments. It is also possible to place a compartment divider every 50 mm. In addition, NEDCON offers various accessories for the shelving systems, including drawers, rails for clothing and plastic containers in a variety of sizes. We have also considered the safety of your employees: the system has been designed and manufactured so that there are no sharp edges within reach of its users.
