

NEDCON Stiffener

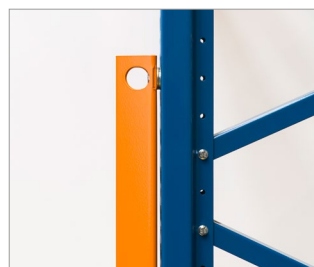

In every storage area where forklift trucks are used, collision damage is an ever-present danger.

NEDCON offers various options to protect your racks from this danger, such as the stiffener. The stiffener is a cost-effective, robust and cleverly designed guide profile for your uprights.

**If it can be done,
consider it done**

Advantages of the NEDCON stiffener

- Affordable reinforcement for your racks
- Optimal distribution of forces thanks to clever design
- Easy to attach to NEDCON uprights
- Extra high quality steel
- Risk of tearing bolt holes minimal
- Available in all RAL colours
- Standard colour available within a few days

If it can be done,
consider it done

Like a shin guard, the stiffener absorbs the impact when a forklift truck - easily weighing in at 4.5 tons - accidentally collides with a rack. The length and profile have been designed to ensure that the force of the collision is optimally distributed in the rack, thus minimising damage. The connection between the stiffener and the upright is equally ingenious: the bolt holes are integrated into the profile in such a way that they are almost impossible to tear or break. Another major advantage.

NEDCON stiffeners are easy to attach to all NEDCON uprights. They are supplied as standard in orange (RAL 2008), but other colors are available.
