

CE certified load capacity of racking components

Application and benefits

CE certified load capacity of racking components

Among other things, NEDCON has specific CE certification for the load-bearing capacity of racking components, also known as ETA (European Technical Assessment). This concerns the load-bearing capacity of NEDCON's beams and frames. In the document below, we will look at what this means and what it means for you, as an official NEDCON partner.

First of all, what does the ETA entail?

NEDCON's **ETA-19/0430** is based on the EAD 200059-00-0302. This last document refers to the test requirements of the EN15512. The CE is a certification that may be used throughout Europe. The ETA contains exactly the same components and characteristics as the abZ and aBG documents (specifically meant for the German market).

NOTE:

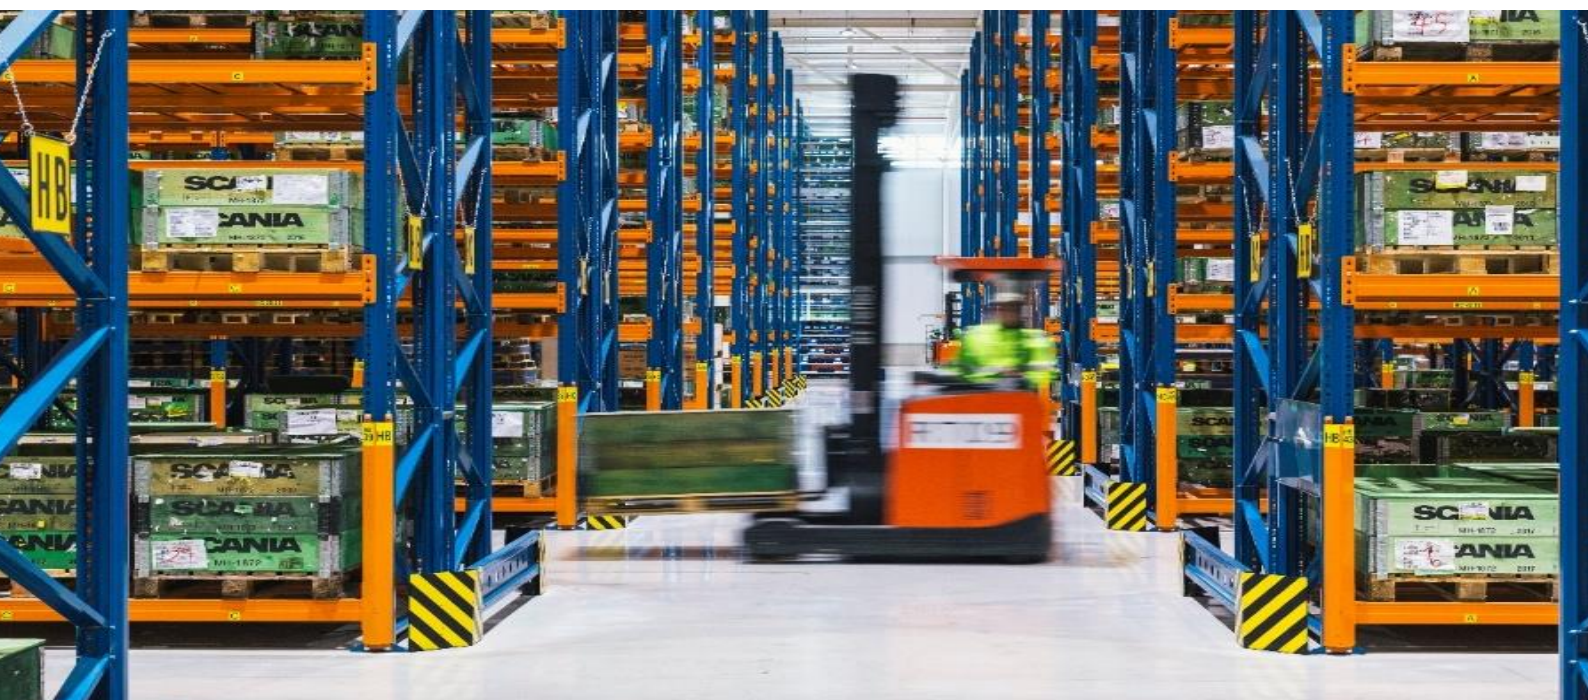

The ETA may be used in Germany, but this is not enough. This is because the ETA does not unambiguously designate EN15512 as the design standard. The abZ/aBG does, so you may use EN15512 for structural design in Germany. This is formally only allowed if you are in possession of an abZ/aBG. This is also the reason why NEDCON possesses both certifications.

Which NEDCON products does the ETA cover?

The ETA-covers:

- NEDCON beams
- NEDCON uprights (except for shelving)

ETA-19/0430 can be found by clicking on [this link](#).

The advantages for you as a partner

The advantage for you as a partner that NEDCON is in possession of an ETA is that load-bearing NEDCON components and connections are CE-certified.

A number of other advantages for you in a row:

- Automatic acceptance of designs by local authorities (this saves valuable time)
- Reduced chance of project delay
- The ETA certificate is available to everyone and can be downloaded easily online
- The ETA can be used in all countries within Europe
- Provides certified parts with a high safety rating

How can you use these benefits in your sales process?

This certification can be used as a sales argument in the offer phase for European projects. NEDCON is one of the first providers of the ETA. This works to your advantage when competing with suppliers who do not have an ETA. In addition, safety plays a very important role in our industry. This certificate shows that NEDCON actually gives priority to this.

We hope this document has provided you with a clear explanation of NEDCON's CE certification and the associated benefits for you as a partner. Do you have any questions? Please feel free to contact us at resellers@nedcon.com
